

# Personal Statement

I'm Assem Chelli from Algeria, I have Magister degree 2013 in Computer Science From Ecole Nationale Supérieure d'Informatique ESI.dz. Currently, I work as part-time software engineer and assistant professor in Bouira university, Algeria. My contributions in Open source projects as a founder, a project manager and Python developer gave me some considerable skills in taking on the responsibility, managing projects, leading teams, Coding in a proper way and respecting the standards. I stood for some freelancing tasks and competitions that generally are hard to resolve and limited in time. Those tasks push me to acquire autonomy, high scripting skills and efficacy to beat time. I am fiercely competitive and readily rise to any challenge. My research experience could be summarized in Search/Indexing in Quran & Arabic which is classified as Information Retrieval/Natural language Processing. I defend my ideas but I respect others' opinions and suggestions. I was speaker in many events and conferences, trained computing students in Python and taught computer basics to non-computing students. I could develop in many programming languages and I am most proficient in Python and C++. Though, I have a solid programming background and extensive experience in PHP and Java too. I've got chosen to be participant in Google Summer of Code 2013, in the project OWASP OWTF (Offensive Web Testing Framework)
